M50–F

2.5G Cloud Managed VPN Router

Products Description

IP–COM 2.5G Cloud Managed VPN Router M50–F is specially designed for small and medium–sized enterprises. Using a high–performance, network–dedicated 3–core processor, the forwarding speed can reach up to 2.5Gbps.

M50–F comes with a series of advanced features (PPPoE, VPN, captive portal, flow control, multi–WAN, load balancing, controller mode, wireless optimization), and makes it easy to implement intelligent network access and management.

Key Feature

- Throughput up to 2.5Gbps.
- Provide 2.5G ports, Gigabit ports, and SFP ports
- Multi-WAN and Load Balancing
- 300 Clients

Product Features

Network Diagnosis

It can diagnose common network faults such as port connection status, port negotiation rate, DHCP service status, broadcast/loop detection, WAN port settings/status detection, DNS, latency, DHCP server intrusion, etc.

Multiple WAN

M50-F supports up to 4 WAN ports. It can realize bandwidth stacking with 4 broadband lines, and the stacking efficiency can reach 98%. It supports intelligent routing, automatic traffic balancing and custom traffic balancing to fully utilize bandwidth resources.

Smart bandwidth management

Smart bandwidth management: No need to set the upper bandwidth limit, you can just fill in the actual bandwidth for access.
Custom bandwidth management: Custom bandwidth management needs to set the upper limit bandwidth of a single host, and the device will carry out strict bandwidth control.

Wireless optimization for Application Scenario

Can optimize channels and power based on enterprise office scenarios; Greatly improves roaming performance and wireless performance.
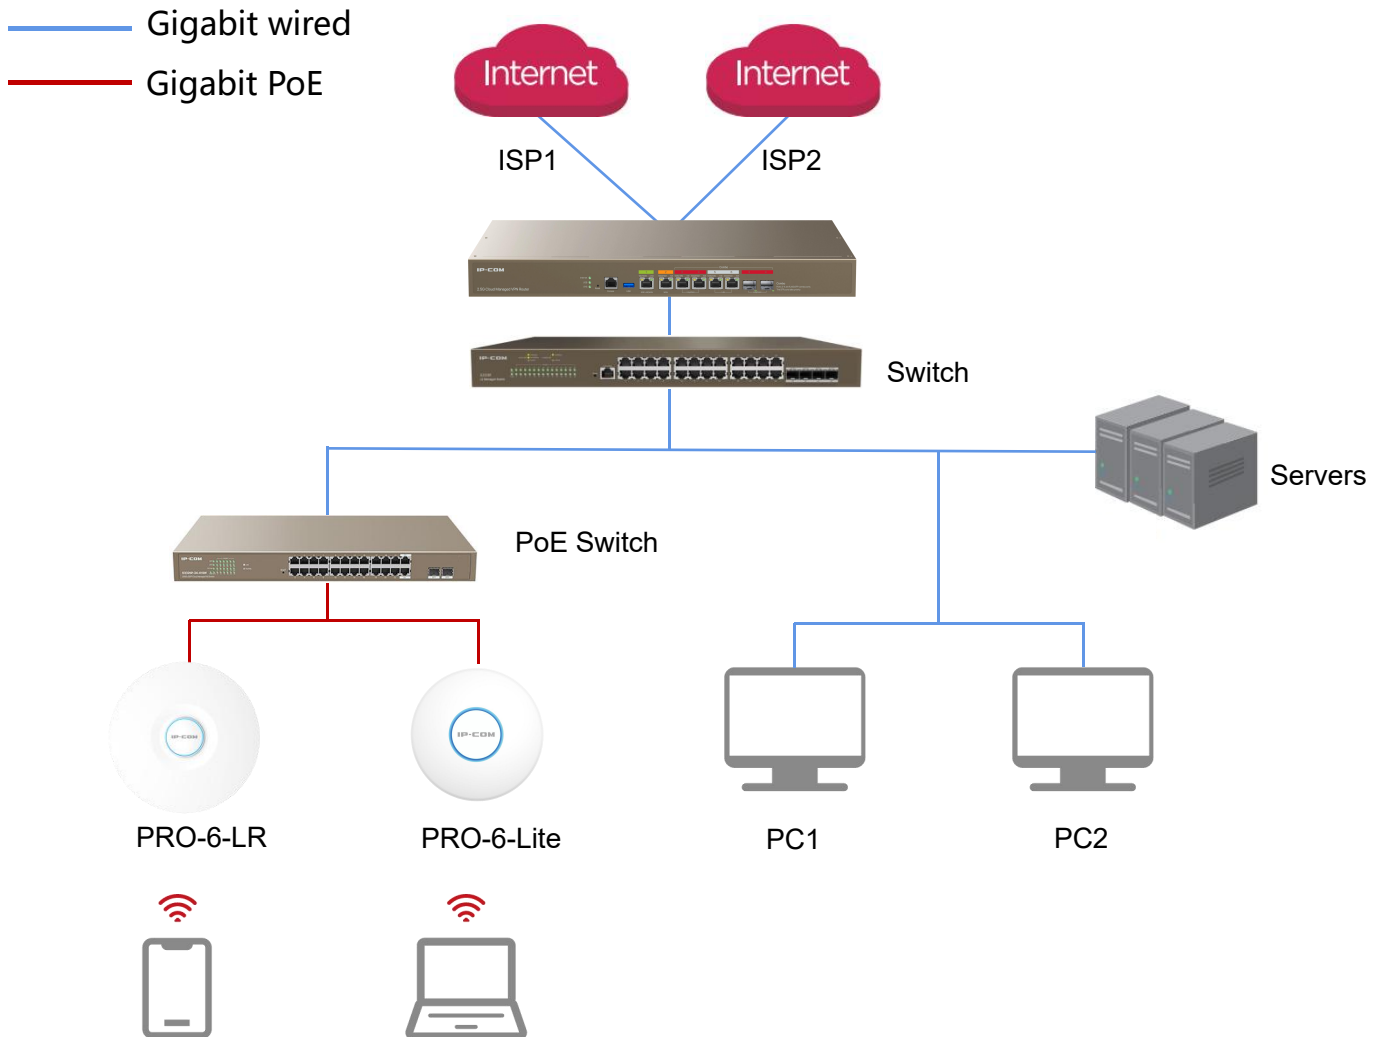

Multiple authentication methods

It supports WEB,E-mail,SMS,Random Code,PPPoE, and other authentication methods to control internet access rights and ensure network security

Efficient firewall

Support attack defense function, effectively resisting various common DoS attacks, DDoS attacks, ARP attacks, flooding attacks and scanning attacks. Support IP and MAC address binding, effectively preventing ARP spoofing. Support MAC address-based filtering to block unauthorized hosts from accessing. Support URL filtering to prevent users from accessing risky domain names, and reduce network risks.
